

Electrical Engineering for SMALL OEMs

Strategic Focus

We'll help you hone in on your key functional requirements, so you don't waste time and money in development you don't need.

Production-friendly

The simplest solutions are still the best. When its time for fabrication, you need designs that are easy and cost-effective to produce and maintain.

Budget Management

You can trust us to protect your bottom line with system designs and integration sized just right for your business and customer.

Scalable Support

We can help you solve problems on a single prototype or a complex multi-machine system.

Maintenance Support

When a system has an issue, our expert troubleshooting is only a phone call away.

H2E looks at your operation the way you do, with an eye to making it more productive and profitable.

Your success is our priority, so we come alongside you to understand your business and products. As skilled engineers people with process experience in a wide range of industries, we'll spot opportunities for you to save time, reduce expenses, and stay ahead of your competition.

Service tailored to your needs

Because we've worked in all aspects of manufacturing, we provide the support you need in:

- Skid design and fabrication
- Specification and sourcing
- Design and drafting services
- Assembly and process automation
- Programming and network integration
- Testing and prototyping
- Materials handling and conveyance
